## DETAILED ACTION

### ***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 7/31/03 has been entered.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-10 and 12-33 are rejected under 35 U.S.C. 102(e) as being anticipated by U.S. Patent No. 6,306,563 to Xu et al. (Xu) for the reasons of record as set forth in paragraph 1 of the Office Action dated 7/31/00, and as further discussed below.

***Response to Arguments***

3. Applicant's arguments filed 7/31/03 have been fully considered but they are not persuasive. Applicant argues that in Example G, Xu does not state if the waveguide was formed by a photolithographic process in which the photomask was in contact with the photoresist, and nowhere in the specification does Xu expressly state that a particular method (i.e. contact masked exposure or non-contact masked exposure) is much preferred over any other method. However, the Examiner notes that Xu discloses proximity and projection (i.e. non-contact) masked exposure, as well as contact masked exposure, at column 24, lines 26-29. It is the position of the Examiner that Xu need not repeat all previously disclosed teachings within each working example in order to anticipate the presently claimed invention (i.e. the teaching at column 24 is sufficient to disclose this limitation of the claimed invention). The disclosure of Xu is not limited to only expressly stated preferred embodiments. The lack of a preference does not negate the fact that both of these well-known methods are taught therein.

Furthermore, Applicant argues that Xu does not teach employing a buffer layer, however Xu discloses a polymerizable buffer layer, for example see column 12, lines 34-41 and Figures 1-6.
